# **CIVIL SOCIETY RESPONSE TO THE FFD ELEMENTS PAPER**

January 28, 2015

This document has been developed by the very broad international group of Civil Society Organizations following the Financing for Development (FfD) process. While the group is diverse and positions might differ on specific issues, this document expresses the elements of common concern.

We welcome the opportunity to provide our comments on the FfD Elements Paper. Overall, we find that the document provides a good starting point for the first drafting session (with the caveat on the structure of the outcome document which is mentioned below) and includes most (but not all) of the policy proposals necessary to ensure a successful outcome of the Third Conference on Financing for Development.

# 1. Overarching issues and concerns

# Structure of the Addis outcome

We are concerned that the FfD Elements Paper departs from the structure of Monterrey and Doha outcomes in subtle but consequential ways. Those agreements provided a holistic framework for the consideration of all different sources of finance that could stand the lapse of time and actually proved remarkable in its ability to do so, namely:

- Mobilization of domestic resources;
- Mobilization of international private flows;
- International trade;
- International financial and technical cooperation;
- External debt;
- Systemic issues (including reform of the global financial and monetary system and global economic governance);
- Other new challenges and emerging issues; and,
- Staying engaged.

We fail to see any justification for a departure from such structure. There is no financing source or new issue that could not adequately fit into the Monterrey/Doha framework. A departure from it, on the other hand, raises several problems. From a legal point of view, the resolution calling for the Third FfD Conference primarily expects it to review the progress in all areas, which becomes methodologically difficult without following the initial structure of what is to be reviewed. Moreover, the Monterrey Consensus represented a

delicate balance between views of different clusters of stakeholders about the importance of certain international and national policy issues, balance that a decision to depart from such a structure in the upcoming review risks upsetting.

We would agree it is desirable that decisions taken at the Third FfD Conference in the area of finance show coherence with the Means of Implementation targets for the Sustainable Development Goals (SDGs). However, some stakeholders seem to imply that this would involve changes to the core chapters agreed in Monterrey/Doha. This is not a convincing argument. FfD is a process in its own right, meant to track in a holistic and coherent way progress in the development finance arena. It pre-dates and transcends the MDGs and had its own separate rationale. On the other hand, the SDGs include means of implementation that are non-financial. Deliberations on the Post-2015 Summit Outcome Document will be the proper place to address such means of implementation. This would not only guarantee complementarities between the Post-2015 framework and FfD agenda but also provide space for financial commitments to be adequately tracked and reviewed within the FfD process.

# Global partnership for development

The Elements Paper also lacks explicit language on the global partnership for development. We believe that the global partnership for development incorporates key elements under the international development cooperation framework that recognizes the critical importance of North-South cooperation and South-South cooperation alike along with that of the global drivers and determinants that shape national policy space for development.

A global partnership for development should be based on the principle of international solidarity enshrined in multiple international instruments, including the Universal Declaration on Human Rights and the Millennium Declaration. This principle recognises that governments are the principal duty-bearers of human rights obligations and that development assistance is essentially a fulfilment of the duty of States to assist other States in fulfilling their human rights obligations. Key elements of a global partnership for development are: (i) a development-oriented trade regime; (ii) facilitating external debt sustainability; (iii) regulating financial markets, including food and commodity price markets; (iv) affordable access to technology and medicines for developing countries; (v) reforming the international tax system; (vi) monetary system; and, (vii) democratizing global economic governance, particularly in the international financial institutions.

It is imperative to re-claim the term in its original meaning and do not allow it to be utilised only to mean partnerships with the private sector and other external stakeholders. There is in fact the need for a full recognition that such a partnership should include governments of developed and developing countries as well as civil society organizations (CSOs), trade unions, parliaments, local authorities and the private sector. It must be deeply rooted in the principles of democratic ownership with full engagement of all stakeholders (with specific attention to traditionally excluded groups and particularly to gender-based exclusion), inclusivity, transparency and accountability, whereby developed countries take the lead in providing resources and the means of implementation, consistent with the principle of common but differentiated responsibilities. On the contrary, the Elements paper conceptualises partnerships in a very narrow sense. Even with regard to such narrow and sector-specific partnerships, it would be essential to establish governance and accountability systems before any such partnership is sanctioned and carried out. There need to be clear criteria, applied *ex ante*, to determine whether a specific private sector actor is fit for a partnership in pursuit of the post-2015 goals. UN member states should be at the forefront of formulating a rights- and criterion-based accountability and governance framework that includes oversight, regulation, independent third-party evaluation, and transparent monitoring and reporting of the partnerships with the private sector.

#### Core principles and elements

The Elements Paper rightly acknowledges that "The post-2015 development agenda will be implemented primarily at the national and subnational level". National ownership and "solid democratic institutions responsive to the needs of the people" are therefore key. If national ownership, democratic processes and alignment with national priorities are not central to all discussions on financing, as well as to the whole set of goals, the potential for change, which the post 2015 and the FfD agenda truly represents, will not be realized. This requires a systematic understanding of development financing by focusing on inequalities and the continued impact of the global financial crisis that exposed risks and underlying vulnerabilities in the international financial system. The Addis FfD conference should take this vulnerability as the starting point in reforming the institutional structures that govern development financing rather than accepting the current situation as the 'new normal'.

The Rio Principle of common but differentiated responsibilities (CBDR) also applies to the Financing for Development agenda. The principle stipulates that developed countries acknowledge the responsibility that they bear in the international pursuit of sustainable development in view of the pressures their societies place on the global environment and of the technologies and financial resources they command. The principle of CBDR also captures the duality of universality and differentiation, implying that the FfD agenda must be built around universality of issues and differentiation in action. Universality demands an agenda that can and indeed must be a differentiated one.

The FfD outcome in Addis must also attest to the kind of multilateralism required for genuine international development cooperation. Such cooperation should go beyond merely identifying global problems and providing policy prescriptions, and aim at genuine collaboration on the basis of CBDR.

The legitimacy of the Addis process is fundamentally connected to the integrity of its means of implementation (MOI), which encompasses not only financial resources and technology transfer for implementing sustainable and equitable development, but also the structural reform of the international financial and trade systems as upheld by the structure and content of the Monterrey Consensus.

While there are isolated references to the need for consistency with human rights standards, the Elements Paper also fails to recognise that a human rights-based approach to economic policy is necessary for equitable outcomes, as endorsed by the UN Special Rapporteur on Extreme Poverty, among others. Drawing on human rights standards

provides a clear normative content and validates existing international legal obligations of governments.

In line with the need for a more explicit commitment to human rights and in order to establish synergy with the proposed agenda and its commitment to leaving "no one behind", all the different dimensions of vulnerability and marginalization should be mentioned explicitly. This will improve the understanding of what is meant when reference is made to "inequality" or "marginalized groups". Failure to include this may result in specific groups becoming invisible. The wording used in the report by the ICESDF (Para 27) exploring the link between poverty and vulnerability could be used: "*Close to one billion people continue to live in extreme poverty. Many live marginally above the poverty line and are vulnerable to falling back into poverty when faced with adverse shocks. This vulnerability is often associated with gender, disability, ethnicity, indigenity and geographic location. Additional development challenges include growing unemployment, particularly among youths, as well as challenges associated with growth of cities."* 

While the Elements Paper recognises the importance of transparency in several of the issues areas, proposals and challenges, it fails to explicitly recognise that transparency is an essential pre-requisite for achieving a multi-stakeholder, inclusive global partnership for development. Transparency, openness of data and accessibility of information must be at the heart of the FfD framework, since participation, accountability, and good governance of finance for development can only be achieved if there is transparency in all resource flows, and participation in decision-making processes. The principles of transparency, accountability and participation must be much more strongly emphasised in the overview section of the document, while special attention must be given to strengthening the section on data, monitoring and follow-up. These principles must be bound into all aspects of FfD-planning, budgeting, policy-making and decision-making about financing, not just the monitoring and follow-up mechanisms, and transparency commitments must apply at all levels - local, national and global. Private and non-state financing actors must also be transparent and accountable for their commitments to FfD.

The Elements Paper also fails to explicitly recognise the International Aid Transparency Initiative (IATI) as a potential solution to increase transparency in **all resource flows**. All actors can publish data to the IATI about their financing activities, and many ODA donors, DFIs, NGOs and private actors are already doing so. As a multi-stakeholder initiative, created to serve the information needs of developing countries, it is essential that the IATI be considered for its applicability to many of the challenges put forward in the Elements Paper, particularly relating to data, monitoring and follow-up.

The Elements Paper rightly acknowledges that the financing needs for sustainable development are enormous but its proposal to rely on "global public and private savings" to meet these needs is problematic. The approach of financing development from outside (i.e. international public and private financial flows and PPPs) negates and ignores the need for developing countries to generate resources for development internally through promoting national and regional production and trade. The overt message of private financial flows and PPPs runs counter to the post-2015 agenda that aspires to "transformative change to eradicate poverty".

# 2. Comments on the sections of the Elements Paper

# Domestic public finance

We would like to highlight the following major challenges, which are missing in the Elements Paper:

- In a globalized economy, no country can tackle tax evasion and avoidance on its own and thus capacity building of tax administrations has to go hand in hand with changes in international and regional tax and fiscal policies and standards;
- More than 100 developing countries are currently not included in the OECD and G20 processes, and even those that have been invited to participate are unable to do so on an equal footing. As long as OECD and G20 are the decision making bodies on international tax standards, the unfair playing field will be maintained and the specific interest and challenges for developing countries will be given less priority;
- Eventually, international cooperation on tax matters will need a legally binding agreement – an international UN tax convention - to ensure a solid framework for the work, including a clear definition of principles as well as implementation of agreements reached;
- Regressive tax policies are drivers of inequality and undermine sustainable development. Tax codes and tax structures are also drivers of gender inequality. Therefore, negotiations about domestic public resource mobilisation must emphasize the importance of progressive taxation and gender-sensitivity. Therefore, negotiations about domestic public resource mobilisation must emphasize the importance of progressive taxation instead of only focusing on the amount of tax collected. The drivers of regressive taxation should also be addressed, including tax related conditions linked to various forms of financing. Furthermore, increasing the tax base in a progressive way would imply shifting the burden of taxes away from people living in poverty, the majority of whom are women, and other marginalized groups at the bottom of the income distribution towards highly profitable sectors;
- Several of the outcomes of the OECD led tax processes, including the process of Automatic Information Exchange and on Base Erosion and Profit Shifting (BEPS), fail to take into account the needs and interests of developing countries. The OECD BEPS process also builds on instruments such as the OECD's Model Tax Treaty, which gives preferential treatment to "residence countries" (mainly OECD member states) at the expense of developing countries (so called "source countries");
- Many developing countries are not able to access the information they need to collect taxes due to lack of international cooperation and "reciprocity-requirements" which they do not have the capacity to fulfil;
- Bank secrecy in intermediate jurisdictions, anonymous shell-companies and lack of transparency in the reporting of multinational companies are key enablers of illicit financial flows;

- Many developing countries are not benefitting from the extraction and use of their natural resources in large part because of lack of transparency, regulation and fair and effective taxation. These problems also contribute to environmental degradation and abuse;
- Fair distribution of revenues and expenditures in line with the sustainable development goals demands strong and functioning labour market institutions specifically, minimum wages and the social dialogue;
- Sustainable and equitable economic development is the bedrock of domestic resource mobilisation. Therefore, tax policies should be used as a tool to promote economic development in developing countries; and,
- The Elements Paper recognises the plight of countries dependent on revenue related to commodity exports due to commodity price volatility. The international community should address the issue through stabilisation of commodities and value addition.

# Domestic and international private finance

Firstly, we find this heading highly problematic since domestic private finance and international private finance are two very different categories of finance and should be treated as such. This is thus an obvious example why - as highlighted above - it is crucial to maintain the structure from the Monterrey and Doha outcomes.

We strongly welcome the recognition that "it is important to learn from the successes and failures of the past, and in particular, avoid maintaining risk in the public sector while guaranteeing high returns to the private partner."

We would like to highlight the following major challenges, which are missing in the Elements Paper:

- Foreign Direct Investment's (FDI) for-profit nature means it cannot tackle several key issues, including much needed public service provision which is vital for sustainable development;
- Given the key limitations of FDI, such as the fact that it hardly reaches Least Developed Countries unless they are major exporters of natural resources, it has proved very difficult to target FDI towards MSMEs, it is often linked with significant outflows of resources, and thus the critical issue is the quality and development contribution of private flows, more than the quantity;
- A vital measure of FDI's development impact is the opportunity it can create for sustainable and decent employment. To achieve this, it is important to pursue all dimensions of the decent work agenda as they are mutually reinforcing, though in particular it is critical to highlight the importance of labour market institutions, like social dialogue and minimum wage, for cementing positive development impacts of FDI;
- Privatization of public goods such as health, education, water and sanitation threatens availability, accessibility, acceptably and quality of these goods, and

increases the overall burden of unpaid care work on women and girls. The profitdriven nature of private sector reduces assess of poor and marginalized communities and can increase territorial and gender inequality: firstly, because to provide services in rural, remote areas or informal settlements is not "cost-efficient"; secondly, because women are overrepresented in low-income households and are most affected by increased tariffs; and, thirdly, because the increase of women's unpaid care work also impacts their possibility to engage in economic, social or political activities;

- Privatization of public goods such as health, education, water and sanitation prevents or reduces access of poor and marginalized communities;
- Limited transparency, corruption and lacking of good governance practices constitute key challenges for the establishment of successful synergies between the public and private sectors. In fact, many investors are actively supporting the idea that there is a positive relationship between improved governance and safeguards and reduced risk/ better and more stable long term returns;
- The lack of transparency and measurement frameworks around private investment flows complicates the measuring of impacts in critical areas including jobs, taxes, and the environment;
- As noted in an OECD discussion paper, "Private participation in infrastructure can be complex, time consuming and subject to frequent renegotiation and restructuring. PPPs are a modality of procurement that has been hugely unsuccessful in OECD countries and therefore developed countries cooperation ministries should abstain from recommending a mechanism that has not worked in their own countries and developing countries should be very careful in applying it, considering their additional governance difficulties that makes oversight of these highly risky mechanism almost impossible and cost recovery even more difficult." (1);
- The risks and problems linked with public private partnerships, including the lack of transparency, efficiency, and the risk of strong negative financial impacts on the public sector are likely to further increase as a result of the recent revamping of large infrastructural programmes;
- Unqualified support for greater "ease of doing business" can have deeply problematic social and environmental outcomes, since ease of doing business tends to be synonymous with reductions in corporate income tax and a more lax regulatory environment (consider, e.g. the World Bank's "Doing Business" rankings);
- While remittances are indeed a significant source of GDP in some countries, policies to ease the transfer of remittances must be conditional on commitments to end the exploitation of migrant workers, an increasing proportion of whom are impoverished women. At a minimum, governments should commit to regulating recruitment agencies and eliminating debt bondage.

<sup>&</sup>lt;sup>1</sup> OFFICIAL SUPPORT FOR PRIVATE INVESTMENT IN DEVELOPING COUNTRY INFRASTRUCTURE, Advisory Group on Investment and Development, 21 March 2014, DCD/WKP(2014)2/PROV

# International public finance

We would like to highlight the following major challenges, which are missing in the Elements Paper:

- The promises to make aid more effective by improving the quality of aid, using country systems for activities managed by the public sector, reduce transaction costs and improve mutual accountability and transparency, untie aid to the maximum extent are far from being met;
- Using Official Development Assistance (ODA) to mobilize other flows is not in line with the need to keep ODA well focused on poverty reduction. Furthermore, this catalytic role of ODA can hardly comply with the fundamental transparency and accountability standards to be applied to all development flows;
- Providers are increasingly delivering ODA as loans, which mostly target Middle Income Countries (MICs) and as a result ODA to Least Developed Countries (LDCs) has been declining. There is also no effective debt sustainability framework to protect against irresponsible and predatory lending to developing countries. Other loopholes in ODA reporting rules allow donors to report in-donor costs such as student and refugee costs as well as debt relief as ODA. Reporting of debt relief is problematic as current reporting rules overstate the true value of debt relief. Furthermore, debt relief should be additional to ODA as agreed in the Monterrey Consensus;
- Using public institutions and resources to leverage private finance entails a number • of risks. For example, the UN Secretary General highlighted the following in a recent report to the UN's Development Cooperation Forum: "Lack of clarity about additionality and purpose; limited influence of donors and recipients on investment design and implementation, diminished transparency and accountability, misalignment of private sector and country priorities; danger of increased debt burden; inattention to small- and medium-sized enterprises; the opportunity cost incurred when use of public money to mobilize private resources does not have the same or a larger development impact than if it had been devoted directly to a developmental purpose; and the risks of misappropriation." The Elements Paper should be cautious about referring to leveraging as a way to make ODA smarter. Smart ODA can be measured by the transformative impact it has on the poorest communities and most commonly discriminated against groups and people not by the additional resources it can mobilise The focus should rather put on making leveraging smarter, hence ensuring it is has a truly transformational development impact for the poorest and is transparent and accountable;
- Important issues such as human rights, gender equality, good governance, environmental protection, comprehensive social protection and democracy will require continuous financing from ODA. The development of specific indicators,

tools and methodologies to evaluate the quality and development effectiveness of aid will also be needed;

- The language on safeguards must be stronger to ensure that development assistance activities do not create or perpetuate legal, institutional, attitudinal, physical and information and communication technology barriers to the inclusion and participation of all, including persons with disabilities and other marginalized groups;
- Macroeconomic policy conditions attached to both concessional and nonconcessional international public financing impose fiscal and monetary constraints to growth and development;
- South-South and triangular cooperation, while increasingly important in the rearchitecture of international relations, should never substitute or downplay the importance of historical responsibilities and agreed commitments of North-South development cooperation;
- There is no assurance that the definition of the new measure for ODA (Total Official Support for Development (TOSD)) does not lead to the loading of ODA with disbursements that were not originally within the ODA definition, with an aim to inflating aid so as developed countries appear as if they have reached the 0.7% target. ODA must remain a standalone item within TOSD with an ultimate goal of poverty eradication;
- Blended finance and public-private partnerships is included in the 'private finance' section of the paper. This implies that private actors will be solely accountable for their actions in such partnerships, whereas (as was noted in the ICESDF report) the public sector should be the actor responsible for planning, delivering and monitoring PPPs, designing policy frameworks to ensure that public interests are safeguarded, while private actors comply with these frameworks. This issue should therefore be included in 'International Public Finance'.

# Trade

The following major challenges are missing from the Elements Paper:

- While patterns of international trade will need to change to adapt to sustainable patterns of consumption and production, significant transfer of technology and flexibility of trade and investment rules must be applied to ensure that this adaptation does not further impoverish developing countries or lead to new inequalities;
- Aggregate export numbers hide the fact that value added, industrialization, and diversification of trade have stalled or gone backwards in most developing regions;
- Global Value Chains (GVCs) have disabled rather than enabled domestic firms and workers from capturing equitable shares of the gains from trade. Lead companies in the chain have benefitted at the expense of the rest, and the governance of the value chain – a matter of international, not national policy framework – needs to be called into question. They also provide convenient cover for multinational

corporations (MNCs) in the event of a catastrophe, as in the case of the Rana Plaza disaster, thus necessitating greater measures for accountability along the entire supply chain;

- Domestic trade can be an important stepping-stone towards international trade, but needs to be enhanced. Therefore, both domestic and international trade must be included in the FfD negotiations;
- Regional and interregional agreements have a huge potential to promote regional integration. It is therefore erroneous to state that "Regional and interregional agreements have the potential to fragment the policy environment and undermine sustainable development strategies";
- Developing and promoting Regional Value Chains is important for regional industrialisation;
- Trade is important in all sectors, including goods, services, intellectual property and other trade related areas. Therefore, it is incorrect when the Elements Paper states that: "Trade is particularly important in agriculture and the global food system";
- The Elements Paper states that; "The share of developing countries' exports in the value of total world exports has dramatically increased; however, progress has been uneven, with LDCs, landlocked and Small Islands Developing States (SIDS) especially disadvantaged". It is important to state why they are disadvantaged, i.e. that they are still exporting raw materials. The imports to the LDCs have also increased faster than the exports leading to a trade deficit among many LDCs;
- The Elements Paper states that "LDCs, LLDCs and SIDS and other countries in special situations insufficiently benefit from the international trading system due to capacity constraint as well as to subsidies of richer countries". While these are valid challenges, it must be underlined that it is the imbalances in the whole trading system that is the biggest challenges, as well as the area where issues of interest to developing countries have been dropped off the agenda;
- International investment agreements have provided foreign investors with exceptionally powerful instruments to challenge public interest policies of sovereign states and create exceptional rights for foreign investors, including an investor-state dispute settlement mechanism that discriminates against domestic investors and undermines sovereign rights of governments to take measures in the public interest and to achieve sustainable development. These agreements need to be terminated and replaced by agreements that promote sustainable development and that supports the capacity and right of governments to take measures to achieve this goal.

# Technology, innovation and capacity building

The following major challenges are missing from the Elements Paper:

• Governments have so far failed to implement the decision from Rio+20 to "Implement measures to promote, facilitate and finance access to and the development, transfer and diffusion of environmentally sound technologies and corresponding know-how to developing countries, on favourable terms, including on concessional and preferential terms, as mutually agreed."

#### Sovereign debt

Firstly, we find this heading highly problematic since the focus on "Sovereign" debt can lead to a lack of awareness of the financial risks associated with private debt. In line with titles of the Monterrey and Doha outcomes, the Addis conference must therefore focus on "External Debt" rather than "Sovereign Debt".

The following major challenges are not mentioned:

- The HIPC and MDRI initiatives failed to reach all countries which were in need of debt relief and came with conditionality that increased debt vulnerability;
- It will not be possible to resolve current debt crises and prevent new ones unless debt audits, principles for responsible lending and borrowing as well as a debt restructuring mechanism are introduced;
- The outcomes from both Monterrey and Doha include clear commitments to an international debt workout mechanism, but governments have so far failed to implement this commitment.

# Systemic Issues

The following major challenges are not mentioned:

- Post-crisis reforms have failed to prevent the presence of institutions whose relative size will not allow failure to be contained without risk to the economy and vital banking services;
- Capital requirements continue to be weighted by the banks themselves;
- Special Purpose Entities (SPEs) in the shadow banking system disrupt lead to large overestimations of FDI flows. They are furthermore being abused for tax avoiding purposes;
- Separation between investment and commercial banking went half-way and has too many loopholes to be effective and prevent speculation by financial firms relying on the public safety net;
- Rules to regulate derivatives markets have been insufficient to stop fuel and food speculation, and the problem is spreading in to other commodities;
- Establishing mechanisms to bring greater stability to exchange rates of reserve currencies and prevent competitive devaluations and currency wars, such as those seen during the recent financial crisis.

### Monitoring, data and follow-up

The following major challenges are not mentioned:

- Many stakeholders in developing countries do not have access to timely, accessible
  or forward looking information on resource flows. This includes decision-makers at
  subnational level who need the information for planning and delivery of services. In
  many developing countries, resources for development flow in from a wide range of
  actors. This data is not able to be combined, compared or analysed either by
  decision makers or by civil society. The IATI is one concrete solution to this;
- Data on poverty, needs and human development indicators are currently poor, out
  of date, not disaggregated or detailed enough and do not tell us whether existing
  finance is responding to needs in many countries. There is very little data on which
  to base top-level financing targets; and especially little evidence in this data on the
  impacts of flows, particularly private flows. National statistical offices in many
  countries are currently lacking in capacity or resource to collect, use, analyse and
  disseminate data to citizens, policy-makers and decision-makers. This hampers
  national planning for development and means that any financial targets for spending
  will be based on little accurate data. The 'data revolution' therefore must be a high
  priority for discussion in FfD;
- Consequently, there needs to be a commitment by national governments to systematically publish – in acceptable and accessible open data formats – accurate, timely and (as far as possible) standardised and comparable revenue and expenditure data, including publication of at least five key budget documents;
- Many international goals and commitments, including a number of those contained in the Monterrey and Doha outcome, have been left without any follow-up mechanisms and have never been implemented by governments;
- Lack of clear indicators often make monitoring of international commitments and decisions difficult;
- The monitoring of illicit financial flows as well as tax avoidance, tax capacity and the resulting 'tax gap' are complicated by lack of transparency and lack of coordination by the United Nations;
- Tax per GDP ratios fail to differentiate between regressive taxes, which create inequality and undermine development, and progressive taxes. Monitoring of taxation must also differentiate natural resource revenues, and all types of tax categories.

| 3. | Specific comm | ents on the list | of policy i | ideas in the annex |
|----|---------------|------------------|-------------|--------------------|
|----|---------------|------------------|-------------|--------------------|

| Policy proposal  | Recommendation   | Explanation   |
|--|--|---|
| Overview   |  |   |
| Adopt national sustainable   | KEEP   |   |
| development financing<br>strategies to finance NSDS  |  |   |
| Ensure significant<br>mobilization of resources<br>from all sources, including<br>through enhanced<br>development cooperation                      | AMEND by replacing<br>"enhanced" with "effective"  | See previous comments about improper<br>terminology such as "smart aid" and the<br>likes.   |
| Domestic public finance  |  |   |
| Raising public revenue, includir   | ng through improved tax administra   | tion  |
| Set a target for general<br>government tax-to-GDP<br>ratios  | DELETE   | Although a tax/GDP measure could be<br>useful for analytical purposes, a target can<br>create a race to increase tax/GDP without<br>taking in to account that some tax policies<br>have negative impacts on development.<br>Therefore, it can lead to the introduction<br>of more regressive tax policies which<br>increase inequality. There is also a risk that<br>fulfilment of the tax/GDP target will<br>become a condition of loans, ODA, etc.,<br>and that such requirements will be difficult<br>for least developed countries to achieve.  |
| Increase ODA for tax capacity,   | AMEND by adding "while   |   |
| and strengthen technical assistance  | assuring that that all capacity<br>building and technical<br>assistance are demand driven,<br>in line with national strategies<br>and priorities and not used to<br>promote specific types of tax<br>policies"   |   |
| Using tax and expenditure polic  | ies to address inequalities  |   |
| Analyse and publish the<br>distributional implications of<br>tax policies, and minimise<br>regressive effects, in line with<br>country preferences | AMEND to "Publish the<br>distributional implications of<br>tax policies and remove<br>regressive policies" and add<br>"States must review tax<br>structures, codes and<br>instruments for explicit and<br>implicit gender bias and ensure<br>they do not reinforce existing<br>gender inequalities, including<br>through their impact on unpaid<br>care work".(Report of the<br>Special Rapporteur on Extreme<br>Poverty and Human Rights,<br>2014, A/HRC/26/28, 2014, p.<br>20) | Progressive tax systems and pro-poor and<br>gender sensitive redistribution are key to<br>tackle inequality. Since regressive tax<br>structures have disproportionate negative<br>impacts on women, states should increase<br>the tax base in a progressive way, based on<br>reviews to identify explicit and implicit<br>human rights and gender impacts to<br>ensure they do not reinforce existing<br>gender and other inequalities, including<br>through their impact on unpaid care, paid<br>work and unpaid labour. This would imply<br>shifting the burden of taxes away from<br>women, people living in poverty and other<br>commonly marginalized groups such as<br>gays, lesbians and trans who often are at<br>the bottom of the income distribution<br>towards highly profitable sectors. |
